OBJECTIVE

Full-stack IT student specializing in system development with hands-on experience in web, mobile, AI, and blockchain applications. Seeking an internship or entry-level role where I can contribute to impactful software products while growing as a developer. Proven ability to ship end-to-end projects from design to deployment across diverse technology stacks.

EXPERIENCE

System Developer Alliance Workshop

Jan. 2026

PHINMA University of Pangasinan

Dagupan City, Pangasinan

- Participated in *Code & Conquer: Understanding Blockchain* – covering the Sui ecosystem, Move programming language, and smart contract development.
- Gained practical understanding of blockchain architecture and decentralized application design principles.

PROJECTS

BayanTrack – Incident Reporting System (Web, Mobile, AI, Blockchain)

Jan. 2026

PHINMA University of Pangasinan

Dagupan City, Pangasinan

- Built a full-stack civic tech platform for LGUs enabling verified citizen incident reporting, real-time dispatch tracking, and coordinated emergency response.
- Developed a Flutter mobile citizen app using Riverpod state management, Dio for API communication, and Flutter Map for live incident geolocation.
- Built a Next.js 16 staff and superadmin web portal with React 19, TypeScript, TanStack Query, Zustand, and Tailwind CSS.
- Architected a Django 4.2 REST API backend with MongoDB, blockchain integrity workflows for tamper-proof incident audit trails, and an AI triage bridge for automated incident classification.
- **Stack:** Flutter, Next.js 16, React 19, TypeScript, Django, MongoDB, Blockchain, AI

AnchorWatch – FinTech Platform (Mobile, Web, AI)

Oct. 2025

PHINMA University of Pangasinan

Dagupan City, Pangasinan

- Built a stablecoin monitoring platform with real-time price alerts, analytics dashboards, and historical trend tracking.
- Integrated an AI model (LLM) to summarize financial data and answer natural-language user queries about stablecoin activity.
- **Stack:** React, FastAPI, Python, PostgreSQL, Firebase, TensorFlow

Lurk – 3D Horror Game (Unity Desktop & Blockchain)

Jan. 2026

PHINMA University of Pangasinan

Dagupan City, Pangasinan

- Developed a 3D first-person horror game set on the moon with atmospheric environment design, enemy AI behavior, and tension-driven gameplay mechanics.
- Implemented an in-game shop powered by Ethereum smart contracts deployed on the Sepolia testnet, enabling on-chain item purchases.
- Built a Node.js backend with PostgreSQL to manage player data, inventory state, and blockchain transaction records.
- **Stack:** Node.js, PostgreSQL, Ethereum (Sepolia), Solidity

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, PHP, SQL, Solidity, Dart, HTML, CSS, Java, Kotlin

Frameworks & Libraries: React, Next.js, Node.js, Express.js, Django, FastAPI, Flutter, TensorFlow, PyTorch, Kotlin Multiplatform, JavaFX

Databases: MongoDB, PostgreSQL, Supabase

Tools & Platforms: Git, GitHub, Docker, Figma, Postman, VS Code, Google Cloud, Firebase, Ethereum (Sepolia)

Concepts: REST APIs, Full-Stack Development, AI Integration, Blockchain & Smart Contracts, Responsive Design, MVC, Authentication, CRUD
